

These wireframes are all for the practice mode, which has 3 types of questions: drag and drop names to photos, multiple choice, and drag and drop last names to first names. Users will be asked every type of question during practice games for a total of about 10 - 15 questions. They have the option to go back to the class information screen at any time. On every screen there will be a progress counter at the bottom.

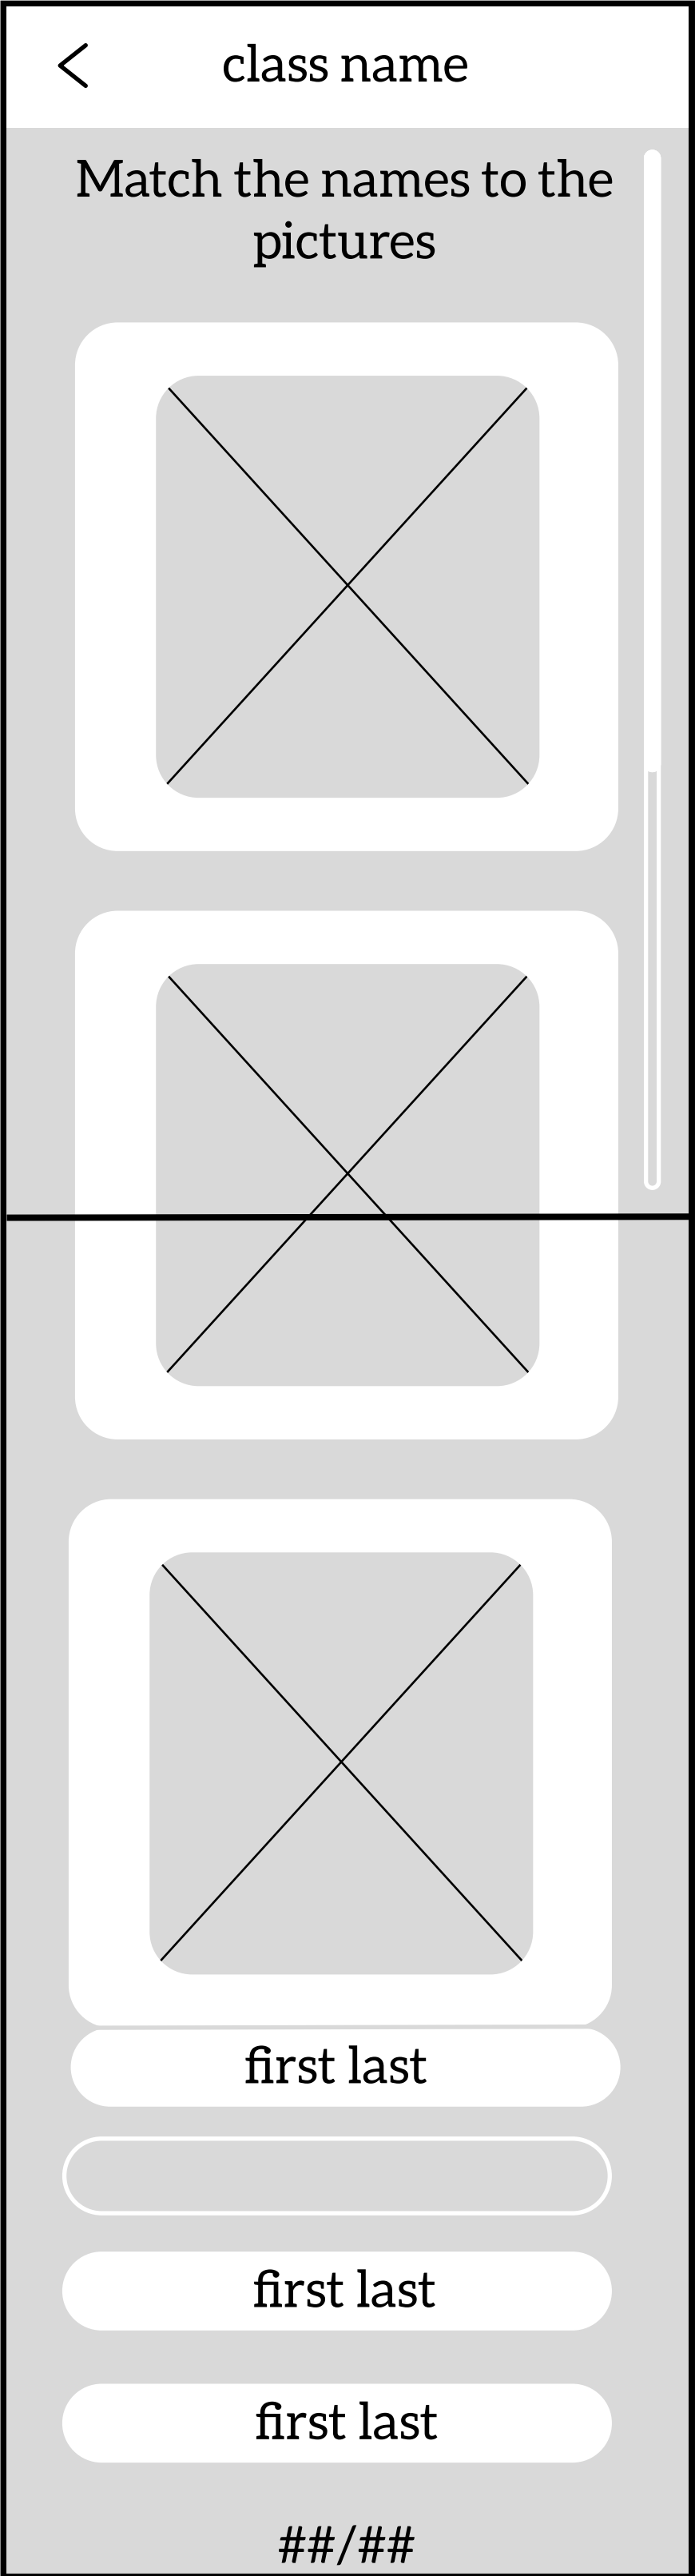

This is the screen for the multiple choice, which will show one picture and multiple name options. Once one is picked, it will turn green or red depending on if it's correct or not.

This is a question where users will match the first and last names. Users will drag the last names to the corresponding first names. Once all names have been matched, correct matches will turn green and incorrect matches will turn red.

This screen will tell the user how they've done after they practiced all the names. It gives the option to play again and return to the class list. It also tells the user what names they had issues with.

Users will scroll past the pictures to see the names, then drag the names to the pictures. Once all names have been assigned to a picture, the names that are wrong will turn red and the right ones will turn green. May have more than 3 pictures. The 3rd picture is an example of a matched name and picture.
